1 Basics

Init

To start using restic, you need to create a repo :

```
restic init --repo /path/to/repo
```

this will ask for a password

Backing up

When you want to backup a folder you need to use this command :

```
restic --repo /path/to/repo backup folder1 folder2 ... folderN
```

This will backup iteratively without duplicating new data

Checking state

```
restic --repo /path/to/repo snapshots
```

This will show all the snapshots (backup command you used) in this repo This is also the command you can use if you want to see the size of your backups

If you want to check the content of the snapshot, you can use this command :

```
restic -r /path/to/repo ls latest|073a90db
```

This will list all the files in the snapshot you can also specify a directory :

```
restic -r /path/to/repo ls latest|073a90db /home
```

This will only list the content of home, its only recursive if you add `--recursive`

Restore

Clean up

To clean up and keep only the most recent snapshot of each unique bakcup :

```
restic forget --keep-last 1 --prune
```

Send to server

To copy a restic repo to a distant server, you can use this command :

```
restic -r sftp:tysufa@192.168.1.238:/mnt/storage/Backups/restic copy --
from-repo ~/Backup/restic
```
